Measures Used

2 x 2 Contingency Table

Observations \ Forecasts			
	A	B	C = A +B
	D	E	F = D + E
	G = A + D	H = B + E	I = C + F

- **Chi-Square** – used to test for statistical significance. Answers the question, “Do we have a large enough sample to know our results are conclusive?”.
- **Heidke Skill Score** – used to test whether we are beating persistence or climatology.
- **Bias** – used to determine whether we are over-forecasting or under-forecasting.

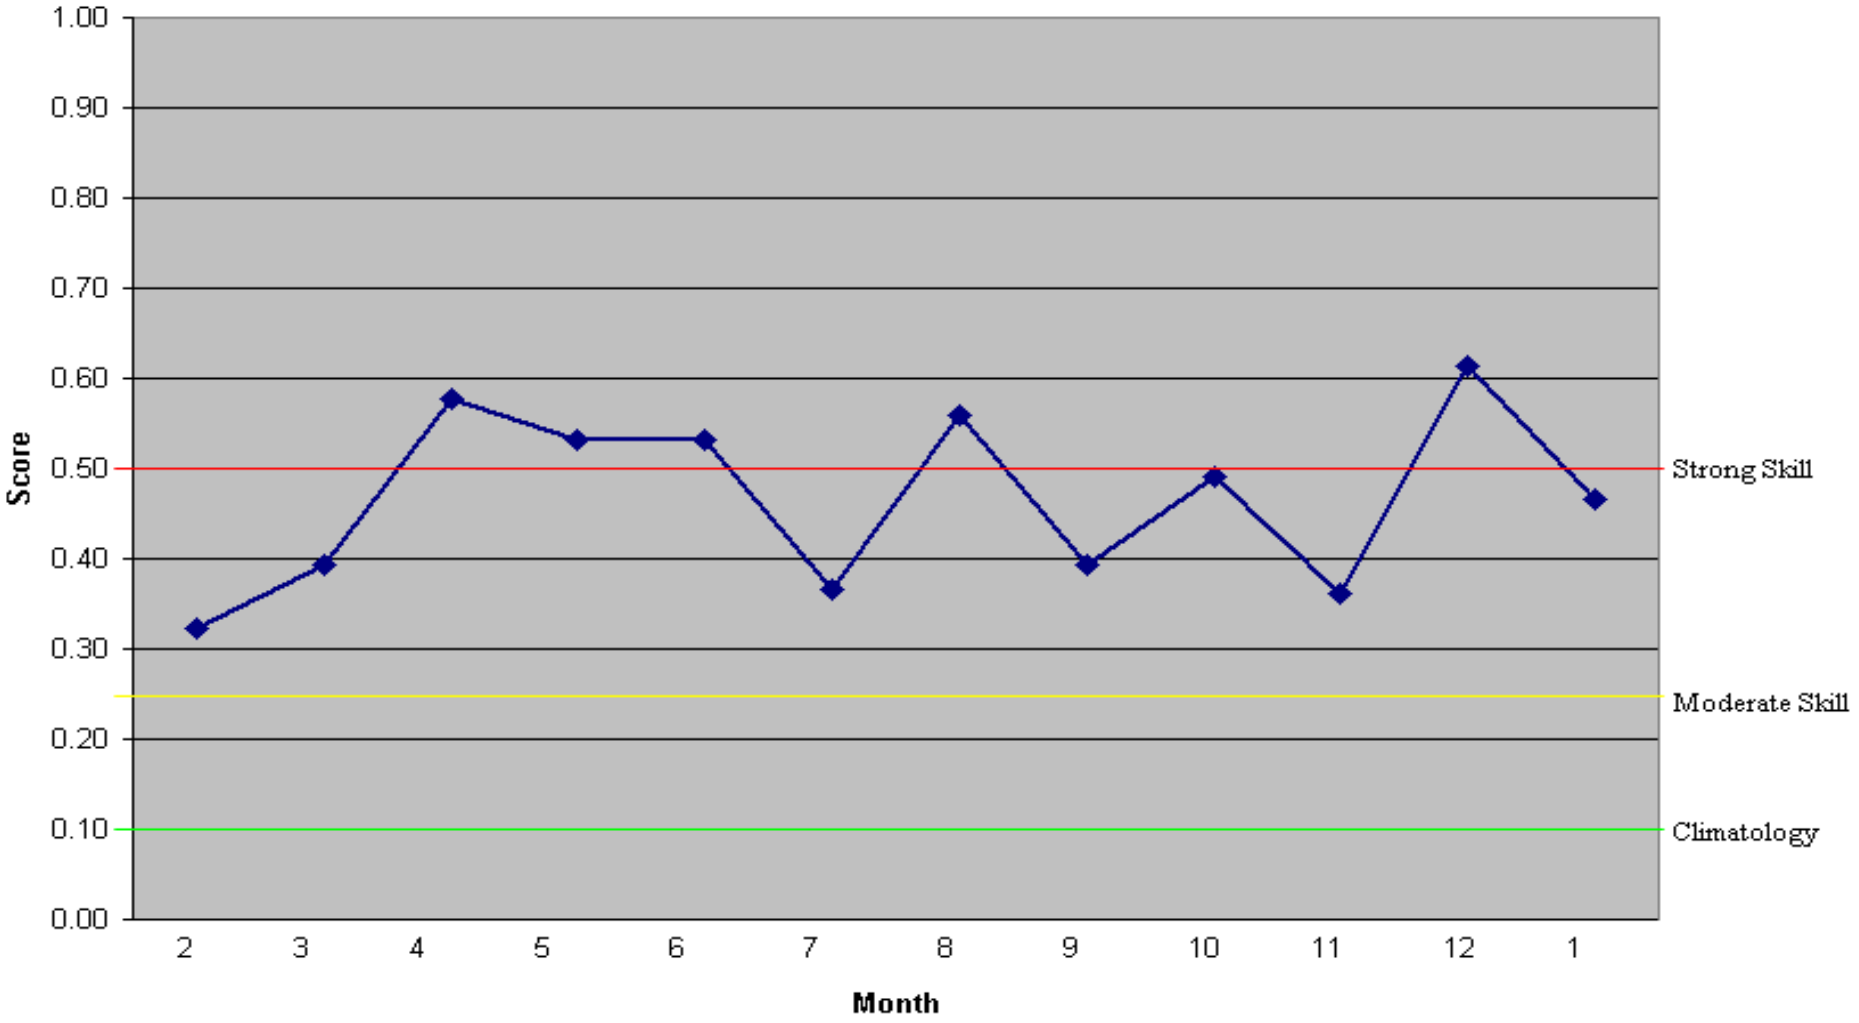
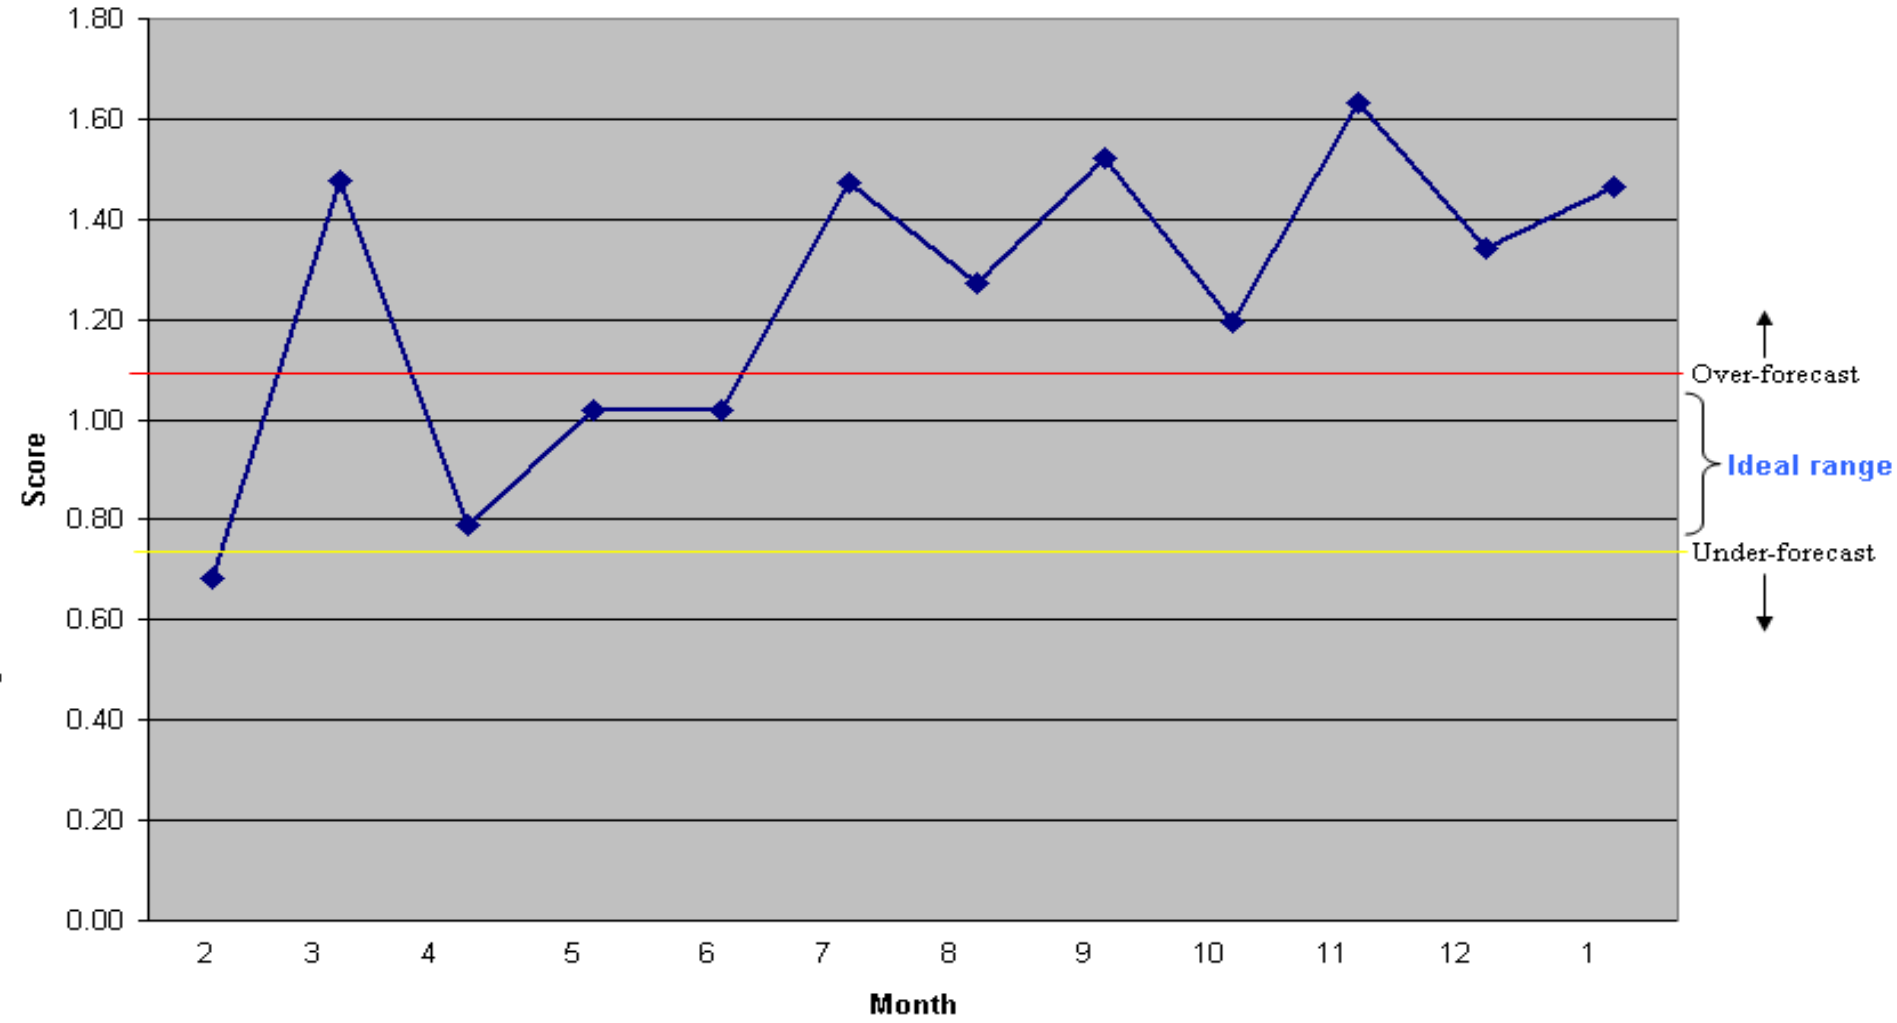
HSS TSTM ALL HOURS



BIAS TSTM ALL HOURS



Review

HWD – Another strong month with a slight over forecasting bias overall and a little under forecasting at 48 hours primarily due to underestimating wrap-around moisture. Increased experience continuing to show.

TSTMS – A good month with an over forecasting bias which is primarily due to aerial coverage vs. occurrences.
